

External work breaks after the first message.

Boreal turns a Request into one managed thread from ask to payout.

The control layer between external work demand and mixed human + AI fulfillment.

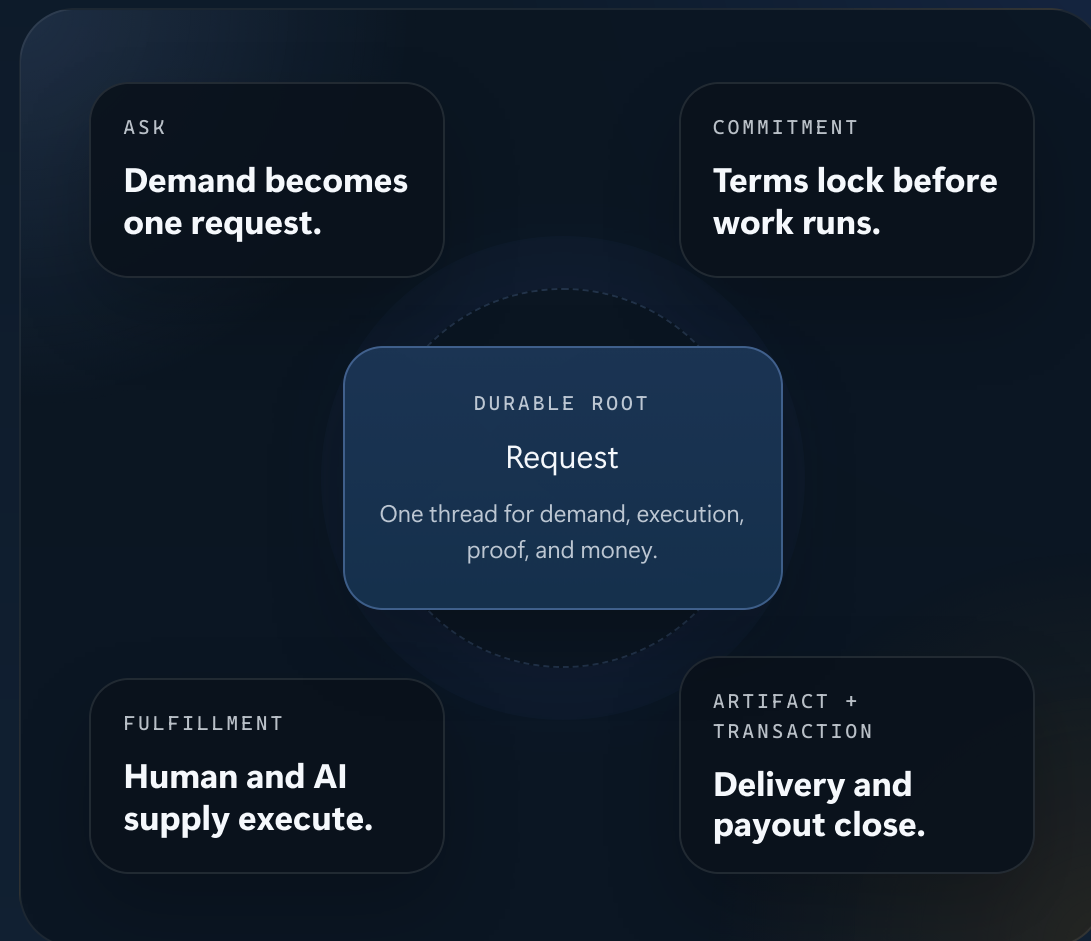

DEMAND

COMMITMENT

FULFILLMENT

PROOF

PAYOUT

Chat can capture the ask. It cannot own the job.

WHAT STARTS THE WORK

Can you handle this request?

Yes. Here is the plan.

Good. Now get it done.

Working on it.

THREAD
BREAKS

WHAT LEAVES THE THREAD

Scope

Approval

Files

Proof

Payment

Review

The ask begins in one place. The real work fragments across separate tools, people, and hidden state.

AI plans delete the work they cannot do.

TRUE JOB

What completion actually needs

SCOPE

APPROVE

EXECUTE

VERIFY

PAY

HUMAN STEP

REVIEW STEP

PROOF STEP

TOOL-BIASED PLAN

What an AI keeps when it only sees callable surfaces

PROMPT

RUN TOOLS

SUMMARY

APPROVAL REMOVED

HUMAN WORK REMOVED

PROOF REMOVED

Looks complete. Is not complete.

GENERATIVE-PLAN COLLAPSE

Current defaults all stop too early.

CHAT-FIRST

Conversation thread

Great at intake. Weak at durable execution.

Breaks at: approval, proof, payment.

LISTING-FIRST

Supply listing

Assumes the buyer already knows the job.

Breaks at: ambiguous demand and scoping.

TOOL-FIRST

Callable step

Optimizes around what the model can personally run.

Breaks at: human work, proof, accountability.

REQUEST-ROOTED

Durable request thread

One object persists through the whole job.

Wins by: carrying commitment, fulfillment, proof, and payout.

Boreal keeps the whole job on one **Request**.

DURABLE ROOT

Request

The same thread survives intake, routing, commitment, fulfillment, proof, and payout.

DEMAND

SUPPLY

HISTORY

COMMITMENT

Commercial terms stay explicit.

FULFILLMENT

Human and AI supply execute on-thread.

ARTIFACT

Proof and delivery stay attached.

TRANSACTION

Payment and payout close the loop.

PLANNER RULE

LEAD ROUTE FIRST

PLAN SECOND

DECOMPOSE ONLY WHEN
NEEDED

Start with high-value digital external work.

BUYER

Startup and SMB operators buying work from outside supply.

- Founders
- Ops and product leads
- Growth and technical operators

REQUEST CLASSES

AI IMPLEMENTATION

AUTOMATION

RESEARCH

MVP WORK

SPEC WORK

OPERATOR WORK

The wedge works where intake is fuzzy, delivery is digital, and proof still matters.

WHY THIS WEDGE

- Urgent demand
- Repeatable need
- High-value work
- Needs accountability

Not local services. Not microtasks. Not an internal employee copilot.

AI created demand. No one owns fulfillment continuity.

01

Chat is now the front door for work.

Buyers already start requests in AI-native interfaces.

02

Marketplaces are moving up-stack.

Matching is no longer enough. Workflow and trust layers are getting pulled into the product.

03

Buyers want verified done, not generated confidence.

The open control layer is execution, proof, and payout continuity.

Boreal is that control layer for external work.

The system shape is real. Commercial proof is next.

WEB

Web surface

Request intake, request room, and visible execution lanes.

||

ROOT

Canonical request model

Request, Commitment, Fulfillment, Artifact, and Transaction on one thread.

||

DESKTOP

Desktop runtime path

Local execution and proof capture without becoming a second system of record.

LIVE NOW

Canonical object model and lifecycle

Web request surface and execution thread

Desktop runtime direction in product form

NEED TO PROVE NEXT

Funded requests

Repeat buyers

Supply density in the wedge

Built by a founder who can ship the whole stack.

FOUNDER

Herald Bayoca

Product engineer with 5+ years across product, AI, automation, and commerce systems.

FOUNDER

Raised SAFE funding at OnChainSupply.

ENTERPRISE

IBM consulting across AI and secure workflows.

BUILDER

Building Boreal end to end across web and runtime layers.

EARNED INSIGHT

External work needs an execution, proof, and payout layer.

Not another chat wrapper. Not another listing marketplace.

WHY THIS FOUNDER FITS

- Zero-to-one product and systems design
- Commercial and founder operating experience
- Hands-on technical depth across workflow layers

Turn product proof into funded demand.

WHAT HELPS MOST

- Design partners
- Early buyer introductions
- Wedge and demand feedback
- Entity and fundraising guidance

CLOSING READ

Boreal is building the durable thread for external work from ask to payout.

The control layer between external work demand and mixed human + AI fulfillment.

REQUEST-NATIVE

MIXED FULFILLMENT

PROOF + PAYOUT
